Viktor Nilsson

A positive, problem-solving frontend developer with 6 years of experience. Believes that good communication and well-working teams is the foundation for great applications.

Passionated about automating things and building interesting and well-working applications for the end-user. Experiences include technologies like React, Redux, Typescript, Emotion, SASS, Node, and also iOS development.

Company history

tretton37 (2018-2021)

Avalon Innovation (2017-2018)

Cybercom (2014-2016)

Kjell & Co (2011-2014)

Side projects

I'm mainly self-taught and I have always enjoyed side projects to learn and to explore business opportunities. If you are curious and want to get to know me better, you can find my side projects at <https://vnil.se/side-projects>

○ Global Dialysis Company - Senior Frontend Developer

Sep 2019 - Feb 2021

I was involved in quite a few projects at this company, but mainly building on a web application that the nurses use during dialysis treatments. Before, this was done by filling in a form and inputting it into the system later after the treatment. Now it's done directly on the tablet and values are read from the machine when possible to speed up and decrease human errors.

○ Modelling Software Company - Frontend Developer

Sep 2018 - May 2019

I helped out with a frontend application for building and simulating complex systems directly in the browser, which otherwise usually is done in desktop applications. This was a challenging domain but very rewarding to work with and many lessons learned.

○ Major German transportation company - iOS Developer

May 2018 - Aug 2018

I worked on an iOS app that would try to replace many of the existing transportation apps in Germany and unify this into one, with timetable, automatic ticket purchasing, etc. I was only involved at the very early stages of this app.

International Shipping and Logistic Company - Frontend developer

Jan 2018 - May 2018

I worked on a brand new website for this company where we used a headless CMS, Contentful, as well as AWS as the cloud provider to support the frontend. We mainly developed new components that the content creators later could use to build pages directly in Contentful.

React

Redux

Contentful

Recycling Service - Frontend Developer

2017

I was a frontend lead in a small team building a platform for a recycling service company to help them organize and structure their clients and relationships, as well as invoices, etc. The goal was to help the client move away from using Excel as their primary data manager to a more sophisticated web application.

React

Redux

SASS

Global Furniture Company - Frontend Developer

Aug 2015 - Aug 2016

I was a frontend developer in a team of 5 frontend developers working closely with UX designers and test to build a configurator where the user can create their own personalized sofa. The most exciting challenge in this project was to learn, understand, and write the code needed for the low-level 3D handling.

Angular 1.x

○ Swedish Cinema Company - iOS Developer

2015

As an app developer in a small team, I helped to refactor and improve SF Bio's app as well as adding new features to it. Knowing how many people were using the app made this an exciting project to work on.

Xcode

Objective-C

JIRA

○ Facility System Provider - Frontend Developer

2015

I was a frontend developer in a small team where we developed an advanced entry phone system that we integrated with their visitor management system. Seeing how the whole chain of events and services worked perfectly together, in the end, was very fulfilling.

Angular 1.x

○ Swedish Cinema Company - iOS Developer

2014

As the sole iOS developer, I created the iOS version of a framework/application that helps blind people enjoy going to the cinema. The application listens to the sound of the movie and synchronized a story-like sound file to be played along with the movie and explain things that a blind person would miss. Going to the cinema and actually see it working was fantastic. The framework was later used by other app developers to develop their own unique apps.
